This two-days workshop is grounded on sessions of **lectures and anatomical dissection**. Lectures will relate on oral cavity anatomy (macroscopic and radiologic) and specific surgical techniques. **Step-by-step tutor-guided anatomical dissections are made on fresh silicone injected specimens (both arteries and veins)**. This course is addressed to physicians dealing with oral cavity pathology (Head&Neck, Otolaryngologist and Maxillo-facial Surgeons) who desire to deepen their knowledge of this technique. **Teaching material in digital format** will be given to the participants at the beginning of the course in order to study individually the topics of the course. Participants that attend the two-days course will receive the Graduate University Diploma of the University of Insubria in Varese.
